

EQUAVO

pH management and distribution support for spray tank mixtures.

- Tank pH management
- Mix preparation
- Spreading support

A considered tank mix.

pH management forms part of mixture preparation. Review the water, the intended products and the application equipment together.

- 01

Assess the source water
- 02

Check mixture compatibility
- 03

Confirm the application plan

Preparation makes a difference.

EQUAVO conditions spray tank mixtures through pH management. The reference product describes mixing and leaf-distribution support with spreader and adhesive functions. Measure the water and mixture, follow the applicable labels and check compatibility before use. EQUAVO is a tank conditioner, not a direct turf green-up treatment.

APPLICATION PLANNING

Set dose, method, water volume and compatibility against the current product label and a site assessment.
